

Barn Owl *Tyto alba*

2005 Minimum of 3,724 pairs. This species has been included in the RBBP report since 1996 and the figures have been based initially on returns from county and regional recorders. Where these have not been available, or if they provide additional data, Schedule 1 returns have been used. Since the totals thus vary, from estimates based on sites recording Barn Owls during the breeding season to accurate counts of known nests, the regional and UK totals are minima and should be used cautiously.
